# Select a ControlLogix System

## Step 1 [ControlLogix I/O Modules](#)

[Page 10](#)

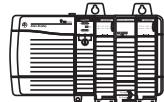

Select:

- I/O modules—Some modules have field-side diagnostics, electronic fusing, or individually isolated inputs/outputs
- A remote terminal block (RTB) or wiring system for each I/O module

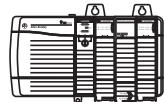

## Step 2 [ControlLogix Integrated Motion](#)

[Page 18](#)

## Step 3 [ControlLogix Communication Modules](#)

[Page 19](#)

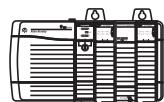

Select:

- Networks
- Communication modules
- Associated cables and network equipment
- Sufficient modules and cables if you are planning a redundant system

## Step 4 [ControlLogix Controllers](#)

[Page 24](#)

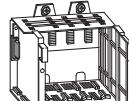

Select a controller:

- Standard ControlLogix controller
- Redundant ControlLogix controller
- Safety GuardLogix controller
- Extreme environment ControlLogix controller
- Standard Armor ControlLogix controller
- Safety Armor GuardLogix controller

## Step 5 [ControlLogix Chassis](#)

[Page 30](#)

Select:

- A chassis with sufficient slots
- Slot fillers for empty slots

## Step 6 [ControlLogix Power Supplies](#)

[Page 31](#)

Select:

- One power supply for each chassis, if you are using standard power supplies
- A power supply bundle if you are planning a redundant power supply system

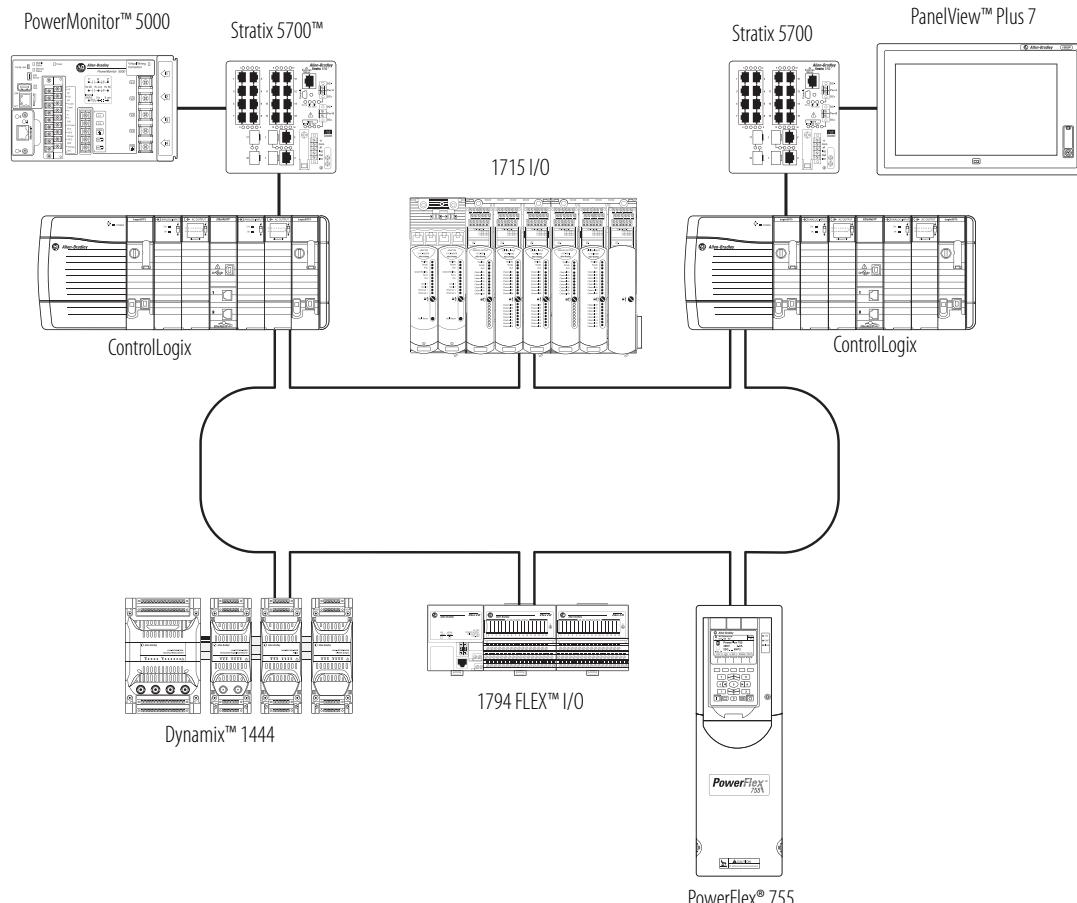

# ControlLogix System Overview

The ControlLogix system provides discrete, drives, motion, process, and safety control together with communication and state-of-the-art I/O in a small, cost-competitive package. The system is modular, so you can design, build, and modify it efficiently with significant savings in training and engineering.

## Example Configuration—ControlLogix System

A simple ControlLogix system consists of a standalone controller and I/O modules in one chassis. For a more comprehensive system, use the following:

- Multiple controllers in one chassis
- Multiple controllers joined across networks
- I/O in multiple platforms that are distributed in many locations and connected over multiple I/O links

## Conformal Coating

A conformal coating solution is offered on select ControlLogix products. Conformal coating helps protect the assembly by providing a layer of protection against contaminants and humidity to extend product life in harsh, corrosive environments. Conformally coated products have a 'K' suffix at the end of the catalog number, such as 1756-A4K. Conformally coated, Allen-Bradley® products meet or exceed these requirements:

- ANSI/ISA 71.04.2013 G3 Environment (10-year exposure)
- IEC 61086-3-1 Class 2
- IPC-CC-830
- MIL-I-46058C
- EN600068-2-52 salt mist test, severity level 3

The most current list of conformally coated products can be found by contacting your local Rockwell Automation distributor, sales office, or at the following location:

<http://www.ab.com/en/epub/catalogs/12762/2181376/2416247/360807/ControlLogix-System.html>

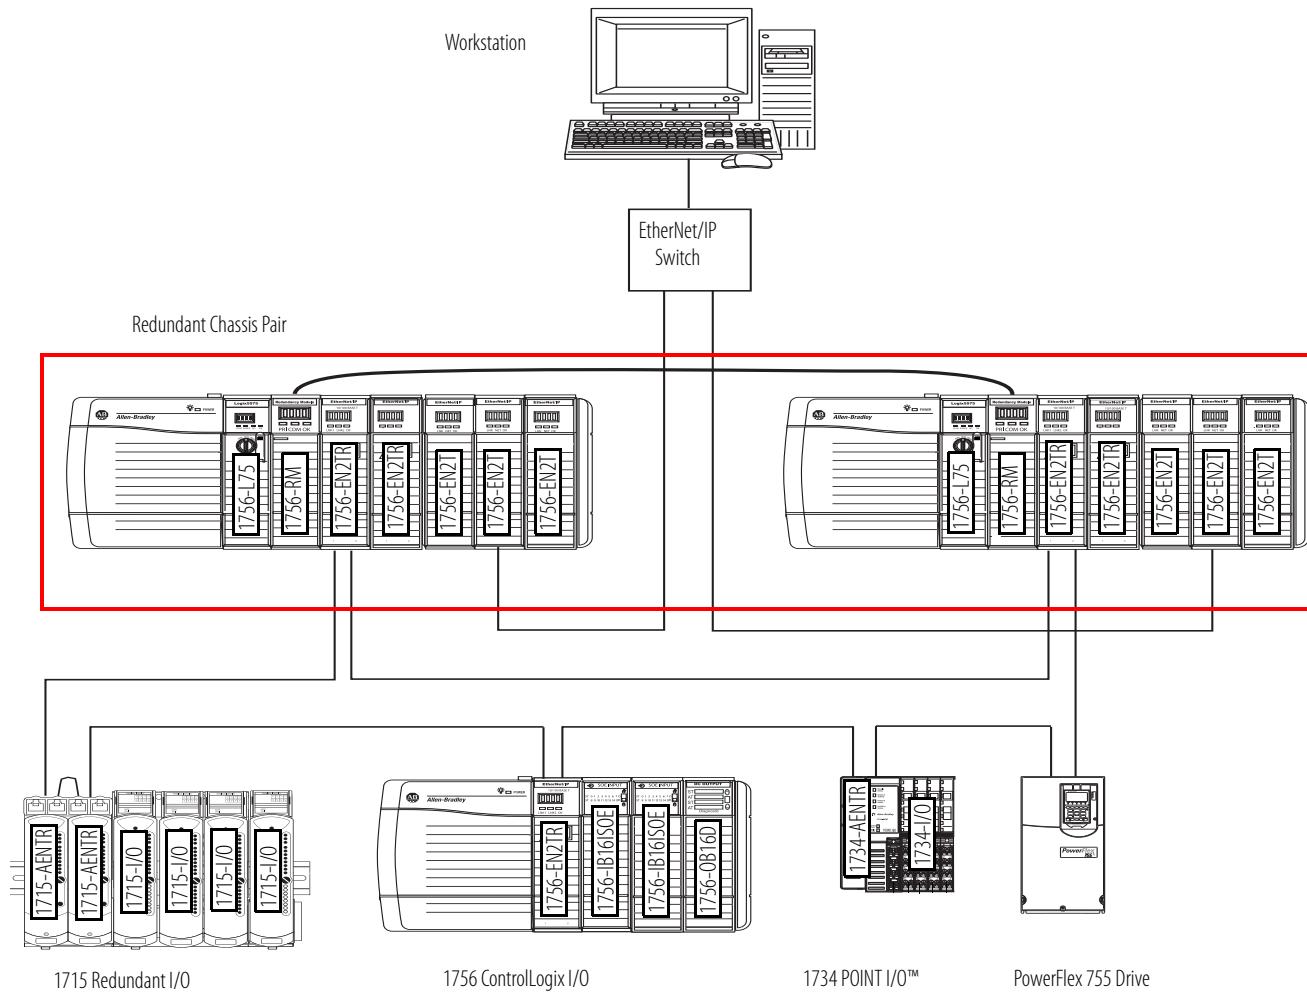

## ControlLogix-XT System

ControlLogix-XT™ (Extended Temperature) controllers function the same way as traditional ControlLogix controllers with an extended temperature range. The ControlLogix-XT products include control and communication system components that are conformally coated to extend product life in harsh, corrosive environments:

- The standard ControlLogix system can withstand temperature ranges from 0...60 °C (33...140 °F).
- When used independently, the ControlLogix-XT system can withstand temperature ranges from -25...70 °C (-13...158 °F).

## Example Configuration—Redundant ControlLogix System

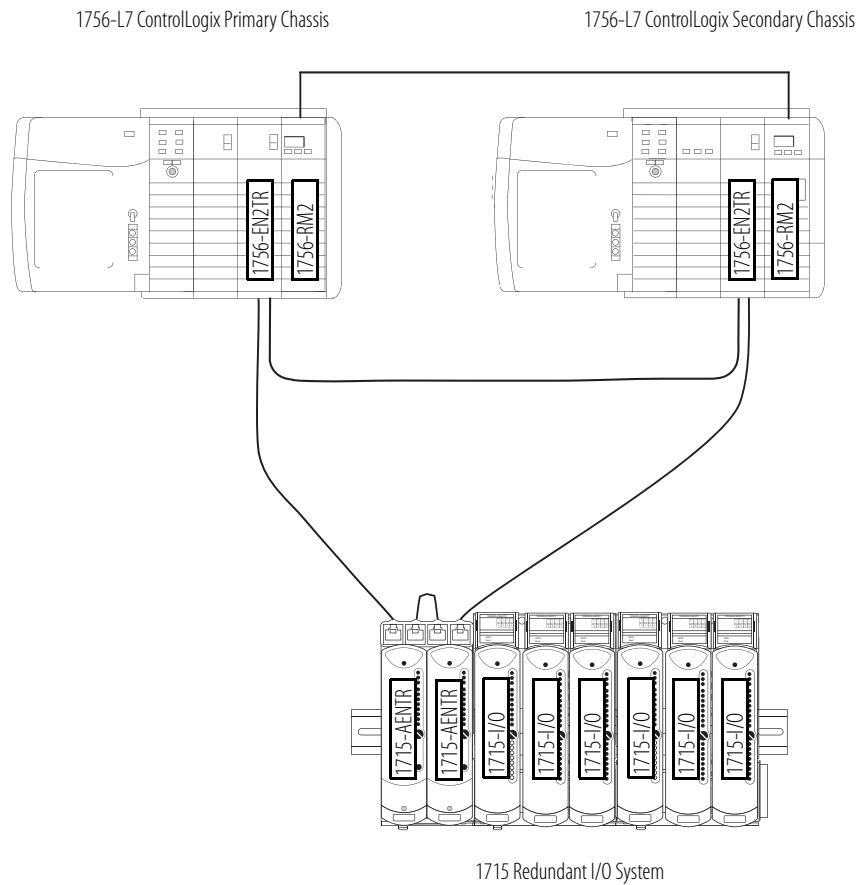

The 1756-L7 ControlLogix controller supports controller redundancy.

## Example Configuration—Redundant I/O System

The 1715 redundant I/O system lets a 1756-L7 ControlLogix controller communicate to a remote, redundant I/O chassis over an EtherNet/IP network. The 1715 redundant I/O system provides fault tolerance and redundancy for critical processes by using a redundant adapter pair and redundant I/O module pairs.

The redundant I/O system must be connected to a 1756-L7 ControlLogix system via an EtherNet/IP network. All connections are established via the Ethernet network by using the topologies that the 1756-EN2TR communication bridge supports.

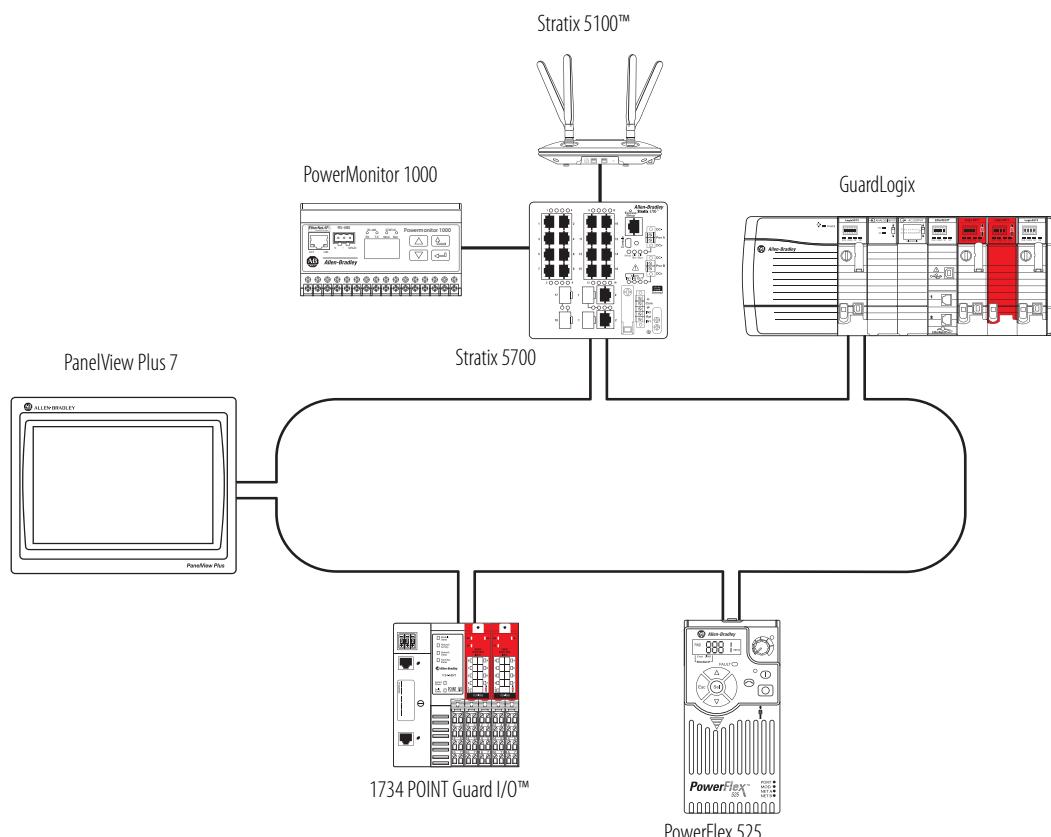

For detailed specifications, see the 1715 Redundant I/O System Specifications Technical Data, publication [1715-TD001](#).

## GuardLogix Safety System

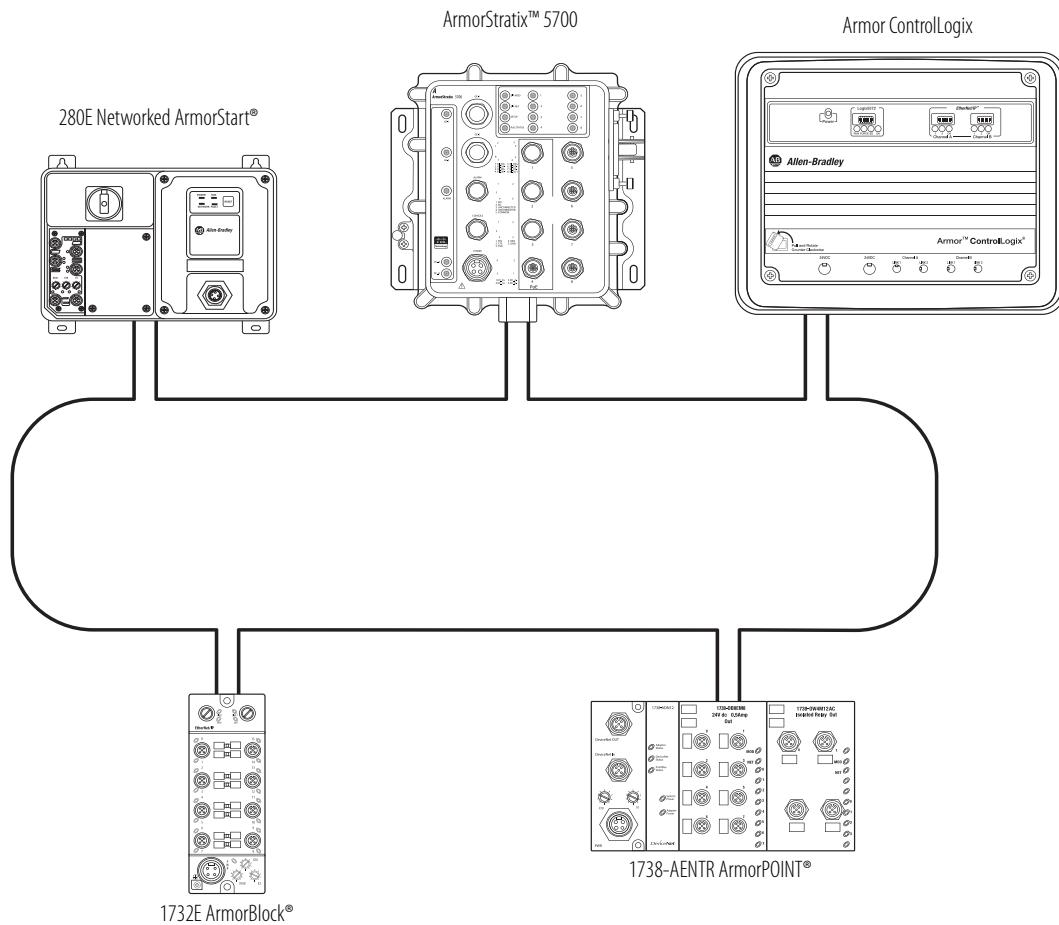

A GuardLogix controller is a ControlLogix controller that also provides safety control. The GuardLogix system is a dual controller solution—you must use a GuardLogix controller with the appropriate safety partner to achieve SIL 3/PLe/Cat. 4. A major benefit of this system is that it is still one project, safety, and standard together. The safety partner controller is a part of the system, is automatically configured, and requires no user setup.

| Application               | Description  |
|---------------------------|--|
| Up to and including SIL 3 | <p>The GuardLogix controller system is type-approved and certified for use in safety applications up to and including SIL 3, according to IEC 61508, and applications up to and including category (PLe/Cat. 4), according to ISO 13849-1.</p> <p>For more information, see the following:</p> <ul style="list-style-type: none"> <li>GuardLogix 5570 Controllers User Manual, publication <a href="#">1756-UM022</a>, provides information on how to install, configure, and operate GuardLogix 5570 controllers in the Studio 5000 Automation Engineering &amp; Design Environment™ projects, version 21 or later.</li> <li>GuardLogix 5570 Controller System Safety Reference Manual, publication <a href="#">1756-RM099</a>, provides information on how to meet safety application requirements for GuardLogix 5570 controllers in Studio 5000® projects, version 21 or later.</li> <li>GuardLogix Controllers User Manual, publication <a href="#">1756-UM020</a>, provides information on how to install, configure, and operate GuardLogix 5560 and GuardLogix 5570 controllers in RSLogix 5000® projects, version 20 or earlier.</li> <li>GuardLogix Controller Systems Safety Reference Manual, publication <a href="#">1756-RM093</a>, provides information on how to meet safety application requirements for GuardLogix 5560 and GuardLogix 5570 controllers in RSLogix 5000 projects, version 20 or earlier.</li> <li>GuardLogix Safety Application Instruction Set Safety Reference Manual, publication <a href="#">1756-RM095</a>, provides programmers with details about the GuardLogix safety application instruction set.</li> </ul> |
| SIL 2                     | <p>Components of the ControlLogix system are type-approved and certified for use in SIL 2 applications, according to IEC 61508.</p> <p>For a list of ControlLogix system components that meet SIL 2 requirements, see the Using ControlLogix in SIL 2 Applications Safety Reference Manual, publication <a href="#">1756-RM001</a>.</p>  |

## Armor ControlLogix and Armor GuardLogix Systems

On-Machine™ standard and safety controllers support the same temperature range of ControlLogix, while offering global certifications and ratings and Ingress Protection (IP67) for dust and wash-down protection for immersion between 15 cm...1 m (5.91...393.70 in.) in harsher environments.

# ControlLogix I/O Modules

The ControlLogix architecture provides a wide range of input and output modules to span many applications, from high-speed digital to process control. The ControlLogix architecture uses a Producer/Consumer model so that input information and output status can be shared among multiple controllers.

Each ControlLogix I/O module mounts in a ControlLogix chassis and **requires** a removable terminal block (RTB) or a 1492 interface module (IFM) to connect all field-side wiring. RTBs and IFMs are not included with the I/O modules. They must be ordered separately.

For detailed specifications, see 1756 ControlLogix I/O Modules Specifications Technical Data, publication [1756-TD002](#).

## AC Digital Input Modules

| Cat. No.   | Inputs/Outputs                          | Voltage Category | Operating Voltage Range | Removable Terminal Block |
|------------|---|------------------|-------------------------|--------------------------|
| 1756-IA8D  | 8 diagnostic inputs<br>(4 points/group) | 120V AC          | 79...132V AC            | 1756-TBNH<br>1756-TBSH   |
| 1756-IA16  | 16 inputs<br>(8 points/group)           | 120V AC          | 74...132V AC            | 1756-TBNH<br>1756-TBSH   |
| 1756-IA16I | 16 individually isolated inputs         | 120V AC          | 74...132V AC            | 1756-TBCH<br>1756-TBS6H  |
| 1756-IA32  | 32 inputs<br>(16 points/group)          | 120V AC          | 74...132V AC            | 1756-TBCH<br>1756-TBS6H  |
| 1756-IM16I | 16 individually isolated inputs         | 240V AC          | 159...265V AC           | 1756-TBCH<br>1756-TBS6H  |
| 1756-IN16  | 16 inputs<br>(8 points/group)           | 24V AC           | 10...30V AC             | 1756-TBNH<br>1756-TBSH   |

## AC Digital Output Modules

| Cat. No.   | Inputs/Outputs   | Voltage Category | Operating Voltage Range                                      | Removable Terminal Block |
|------------|--|------------------|--|--------------------------|
| 1756-0A8   | 8 outputs<br>(4 points/group)                                  | 120/240V AC      | 79...265V AC   | 1756-TBNH<br>1756-TBSH   |
| 1756-0A8D  | 8 diagnostic, electronically fused outputs<br>(4 points/group) | 120V AC          | 74...132V AC   | 1756-TBNH<br>1756-TBSH   |
| 1756-0A8E  | 8 electronically fused outputs<br>(4 points/group)             | 120V AC          | 74...132V AC   | 1756-TBNH<br>1756-TBSH   |
| 1756-0A16  | 16 mechanically fused/group outputs<br>(8 points/group)        | 120/240V AC      | 74...265V AC   | 1756-TBNH<br>1756-TBSH   |
| 1756-0A16I | 16 individually isolated outputs                               | 120/240V AC      | 74...265V AC   | 1756-TBCH<br>1756-TBS6H  |
| 1756-0N8   | 8 outputs<br>(4 points/group)                                  | 24V AC           | 10...30V AC, current > 50 mA<br>16...30V AC, current < 50 mA | 1756-TBNH<br>1756-TBSH   |

## DC Digital Input Modules

| Cat. No.     | Inputs/Outputs                                      | Voltage Category              | Operating Voltage Range                                      | Removable Terminal Block |

These catalog numbers end in an H, such as 1797-IE8H. |

## Accessories—I/O Modules

### 1756 Removable Terminal Blocks

Removable terminal blocks (RTBs) provide a flexible interconnection between your plant wiring and 1756 I/O modules. The RTB plugs into the front of the I/O module. The type of module determines the RTB you need. You can choose screw-clamp or spring-clamp RTBs.

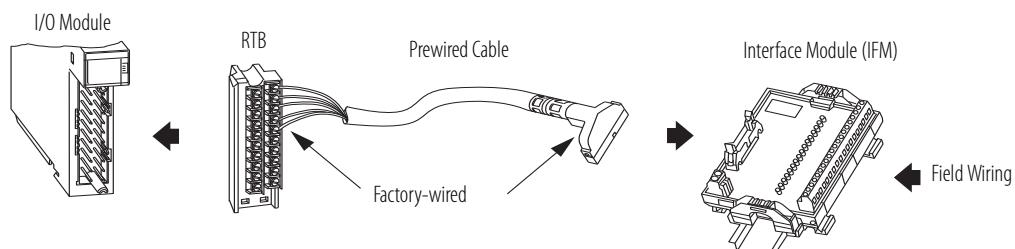

RTBs are not shipped with I/O modules. You must order them separately. The standard housing on the front of the wiring arm is not necessarily deep enough for  $2.5\text{ mm}^2$  (14 AWG) wiring. If you plan to use  $2.5\text{ mm}^2$  (14 AWG) wiring, also order the extended housing. For more information on Extended-Depth Housing, see Rockwell Automation Knowledgebase article #41488, Use of the 1756-TBE Extended Terminal Housing. You can access the article at: <https://rockwellautomation.custhelp.com/> (login is required).

| Attribute    | 1756-TBNH                                    | 1756-TBSH  | 1756-TBCH  | 1756-TBS6H   | 1756-TBE                              |
|--------------|--|--|--|--|---------------------------------------|
| Description  | 20-position NEMA screw-clamp removable block | 20-pin spring-clamp removable terminal block with standard housing | 36-pin cage-clamp removable terminal block with standard housing | 36-pin spring-clamp removable terminal block with standard housing | Extended-depth terminal block housing |
| Screw torque | 0.8...1 N•m<br>7...9 lb•in                   |  | 0.4 N•m<br>4.4 lb•in   |  | —                                     |

### Wiring Systems

As an alternative to buying RTBs and connecting the wires yourself, you can buy a wiring system of the following:

- Interface modules (IFMs) that provide the I/O terminal blocks for Digital I/O modules. Use the prewired cables that match the I/O module to the IFM.
- Analog interface modules (AIFMs) that provide the I/O terminal blocks for analog I/O modules. Use the prewired cables that match the I/O module to the AIFM.
- I/O module-ready cables. One end of the cable assembly is an RTB that plugs into the front of the I/O module. The other end has individually color-coded conductors that connect to a standard terminal block.

# ControlLogix Integrated Motion

The Logix architecture supports motion control components that work in a wide variety of machine architectures:

- Integrated Motion on the EtherNet/IP network supports a connection to Ethernet drives.
- The Kinetix® integrated-motion solution uses a SERCOS or EtherNet/IP interface to perform multi-axis, synchronized motion.
- Logix integrated motion supports the analog family of servo modules for controlling drives/actuators.
- Networked motion provides connection via the DeviceNet network to one axis drive to perform point-to-point indexing.

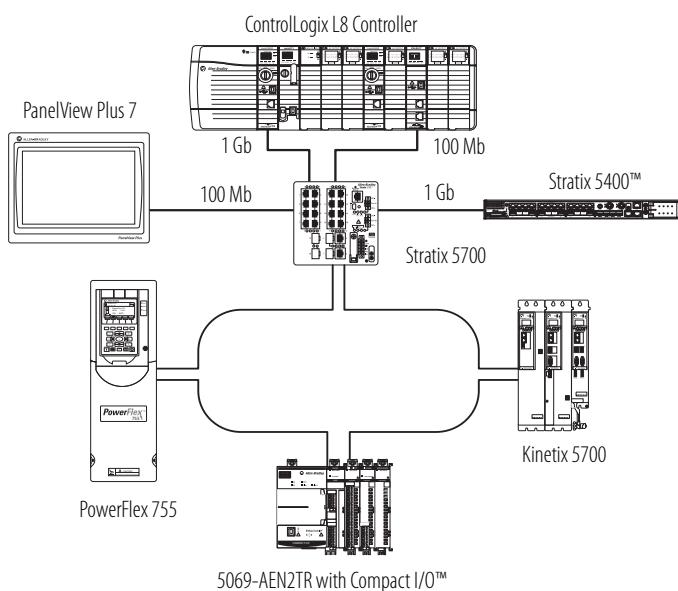

For detailed specifications on motion interface modules, see the 1756 ControlLogix Integrated Motion Modules Specifications Technical Data, publication [1756-TD004](#).

For more information, see these publications:

- Motion Analyzer CD to size your motion application and to make final component selection  
Download the software from <https://motionanalyzer.rockwellautomation.com/>
- Kinetix Motion Control Selection Guide, publication [GMC-SG001](#), to verify drive, motor, and accessory specifications

## Integrated Motion on an EtherNet/IP Network

| Product                                       | Consideration  |
|---|--|
| Drive that supports EtherNet/IP connections   | Unlimited velocity, torque, and VHz configured drives: <ul style="list-style-type: none"> <li>• Kinetix 6500 drives</li> <li>• Kinetix 5700 drives</li> <li>• Kinetix 5500 drives</li> <li>• Kinetix 350 drives</li> <li>• PowerFlex 755 drives</li> <li>• PowerFlex 527 drives</li> </ul> |
| ControlLogix controller                       | <ul style="list-style-type: none"> <li>• 1756-L7: as many as 100 drives per controller</li> <li>• 1756-L8: as many as 256 drives per controller</li> </ul>   |
| ControlLogix EtherNet/IP communication module | <ul style="list-style-type: none"> <li>• 1...8 position loop axes that are configured with the 1756-EN2T or 1756-EN2TR modules</li> <li>• 1...128 position loop axes that are configured with the 1756-EN3TR module</li> </ul>   |

# ControlLogix Communication Modules

Separate communication modules are available for different networks. Install multiple communication modules into the ControlLogix backplane to bridge or route control and information data between different networks. You can route a message through a maximum of four chassis (eight communication hops). You do not need a ControlLogix controller in the chassis.

For detailed specifications, see the 1756 ControlLogix Communication Modules Specifications Technical Data, publication [1756-TD003](#).

## EtherNet/IP Communication Modules

EtherNet/IP (Ethernet Industrial Protocol) is an open industrial-networking standard that supports real time I/O messaging and message exchange. The EtherNet/IP network uses off-the-shelf Ethernet communication chips and physical media.

| Cat. No.   | Description                                 | Media       | Communication Rate | Integrated Motion on the EtherNet/IP Network Axes, max | TCP/IP Connections | Logix Connections |
|------------|---|-------------|--------------------|--|--------------------|-------------------|
| 1756-EN2F  | EtherNet/IP bridge, fiber                   | Fiber       | 100 Mbps           | 8  | 128                | 256               |
| 1756-EN2T  | EtherNet/IP bridge, copper                  | Copper      | 10/100 Mbps        | 8  | 128                | 256               |
| 1756-EN2TR | EtherNet/IP bridge, embedded switch, copper | Dual copper | 10/100 Mbps        | 8  | 128                | 256               |
| 1756-EN3TR | EtherNet/IP bridge, embedded switch, copper | Dual copper | 10/100 Mbps        | 128  | 128                | 256               |

## Select a ControlLogix System

---

| Cat. No.     | Description   | Media       | Communication Rate | Integrated Motion on the EtherNet/IP Network Axes, max | TCP/IP Connections | Logix Connections |
|--------------|---|-------------|--------------------|--|--------------------|-------------------|
| 1756-EN2TXT  | ControlLogix-XT, extended temperature EtherNet/IP bridge, copper for extreme environments | Copper      | 10/100 Mbps        | 8  | 128                | 256               |
| 1756-EN2TRXT | ControlLogix-XT, extended temperature EtherNet/IP bridge, embedded switch, copper         | Dual copper | 10/100 Mbps        | 8  | 128                | 256               |

| 1756-ENBT    | EtherNet/IP bridge, copper  | Copper      | 10/100 Mbps        | —  | 64                 | 128               |
| 1756-EWEB    | Ethernet web server module  | Copper      | 10/100 Mbps        | —  | 64                 | 128               |

## ControlNet Communication Modules

The ControlNet network combines the functionality of an I/O network and a peer-to-peer network, providing high-speed performance. The ControlNet network provides deterministic, repeatable transfers of critical control data.

| Cat. No.    | Description  | Communication Rate | Logix Connections  | Number of Nodes |
|-------------|--|--------------------|--------------------|-----------------|
| 1756-CN2    | ControlNet bridge, standard media  | 5 Mbps             | 128 <sup>(1)</sup> | 99              |
| 1756-CN2R   | ControlNet bridge, redundant media                                       | 5 Mbps             | 128 <sup>(1)</sup> | 99              |
| 1756-CNB    | ControlNet bridge, standard media  | 5 Mbps             | 64 <sup>(2)</sup>  | 99              |
| 1756-CNBR   | ControlNet bridge, redundant media                                       | 5 Mbps             | 64 <sup>(2)</sup>  | 99              |
| 1756-CN2RXT | ControlLogix-XT, extended temperature ControlNet bridge, redundant media | 5 Mbps             | 128 <sup>(1)</sup> | 99              |

(1) 128 connections are available for standard use. An extra three connections are reserved for redundant control.

(2) Recommend using only 40...48 Logix connections for I/O.

## DeviceNet Communication Module

The DeviceNet network provides connections between simple, industrial devices (such as sensors and actuators) and higher-level devices (such as controllers and computers).

| Cat. No. | Description      | Communication Rate   | Number of Nodes |
|----------|------------------|--|-----------------|
| 1756-DNB | DeviceNet bridge | 125 Kbps (500 m max)<br>250 Kbps (250 m max)<br>500 Kbps (100 m max) | 64              |

## Data Highway Plus and Remote I/O Communication Modules

The Data Highway Plus network supports messaging between devices. The remote I/O link connects to remote I/O chassis and other intelligent devices.

The 1756-DHRIOD module supports messaging between devices on DH+™ networks. The remote I/O functionality enables the module to act as a scanner for transferring digital and block transfer data to and from remote I/O devices.

The 1756-RIO module can act as a scanner or adapter on a remote I/O network. The 1756-RIO transfers digital, block transfer, analog, and speciality data without message instructions.

| Cat. No.      | Description   | Communication Rate                | DH+ Connections                | RIO Connections   | Maximum Recommended Logix Connections |
|---------------|---|-----------------------------------|--------------------------------|---|---------------------------------------|
| 1756-DHRIOD   | Data Highway Plus/Remote I/O two-channel communication module                                       | 57.6 Kbps, 115.2 Kbps, 230.4 Kbps | 32 DH+ messages per DH+ module | Remote I/O scanner only<br>32 logical rack connections per remote I/O channel<br>16 block transfer connections per remote I/O channel | 32                                    |
| 1756-RIO      | Remote I/O communication module   | 57.6 Kbps, 115.2 Kbps, 230.4 Kbps | —                              | Remote I/O scanner or adapter<br>32 physical racks (0...76), any combination of rack size and block transfers                         | 10 scheduled I/O                      |
| 1756-DHRIOXTR | ControlLogix-XT, extended temperature Data Highway Plus/Remote I/O two-channel communication module | 57.6 Kbps, 115.2 Kbps, 230.4 Kbps | 32 DH+ messages per DH+ module | Remote I/O scanner only<br>32 logical rack connections per remote I/O channel<br>16 block transfer connections per remote I/O channel | 32                                    |

## Accessories—DH+ and Remote I/O Networks

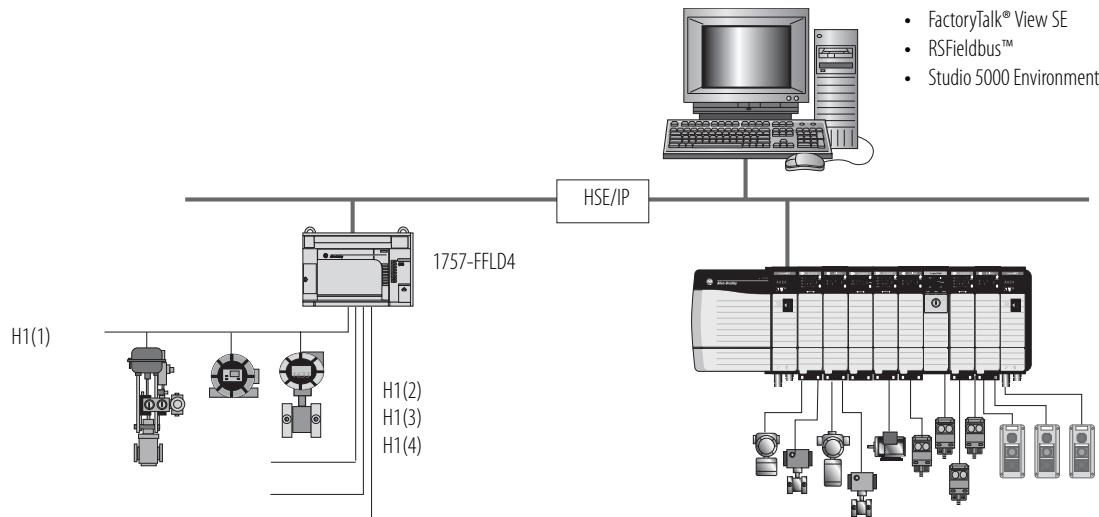

| Cat. No.    | Description  | Specifications  |
|-------------|--|---|
| 1770-CD     | Cable to connect communication module to DH+ network | Belden 9463 twinaxial   |
| 9300-RADKIT | Remote access dial-in kit                            | 56 Kbps modem connection to devices on a DH+ network includes the following: <ul style="list-style-type: none"><li>• Pre-configured modem</li><li>• Communication module</li><li>• DIN rail mounting hardware</li><li>• Associated cables</li></ul> |

## FOUNDATION Fieldbus Linking Devices

The FOUNDATION Fieldbus protocol is a network that is designed for distributed control of process applications.

| Cat. No.    | Description  | Communication Rate  | Number of H1 Ports | Devices per H1 Link        | Devices per Linking Device |
|-------------|--|---|--------------------|----------------------------|----------------------------|
| 1757-FFLD2  | FOUNDATION Fieldbus bridge to an Ethernet network  | FOUNDATION Fieldbus: 31.25 Kbps<br>EtherNet/IP: 10/100 Mbps | 2                  | 16<br>(8...10 recommended) | 32                         |
| 1757-FFLD4  |  |   | 4                  |                            | 64                         |
| 1757-FFLDC2 | FOUNDATION Fieldbus bridge to a ControlNet network | FOUNDATION Fieldbus: 31.25 Kbps<br>ControlNet: 5 Mbps       | 2                  | 16<br>(8...10 recommended) | 32                         |
| 1757-FFLDC4 |  |   | 4                  |                            | 64                         |

## Example Configuration—Bridge to EtherNet/IP Network

## Other Connectivity Options

| Option             | Consideration  |
|--------------------|--|
| USB connection     | The ControlLogix controllers have a USB port in place of the serial port. <sup>(1)</sup> If your application requires RS-232 functionality, see the many Encompass Partners' products at <a href="http://www.rockwellautomation.com/encompass">http://www.rockwellautomation.com/encompass</a> . |
| DH-485 network     | The controller serial port is compatible with DH-485 communication. The DH-485 connection does support remote programming and monitoring via the Logix Designer application.<br>Or, add a 1756-DH485 communication module.   |
| SynchLink™ network | The SynchLink communication module (1756-SYNCH) provides time synchronization and data broadcasting capabilities for distributed motion and coordinated drive control. The module connects a ControlLogix chassis to a SynchLink fiber-optic communication link.                                 |

(1) The USB port is intended only for temporary local programming purposes and not intended for permanent connection. Do not use the USB port in hazardous locations.

## Modbus Support

To access a Modbus TCP network, connect through the embedded Ethernet port of the CompactLogix 5370 controllers and execute a ladder-logic routine. For more information, see Knowledgebase document 470365 at <http://www.rockwellautomation.com/knowledgebase/>.

To access a Modbus RTU network, connect through the serial port (if available) and execute a ladder-logic routine. For more information, see Using Logix5000™ Controllers as Masters or Slaves on Modbus Application Solution, publication [CIG-AP129](#).

# ControlLogix Controllers

The ControlLogix controller provides a scalable controller solution capable of addressing many I/O points.

The controller can be placed into any slot of a ControlLogix chassis and multiple controllers can be installed in the same chassis. Multiple controllers in the same chassis communicate with each other over the backplane (just as controllers can communicate over networks) but operate independently.

ControlLogix controllers can monitor and control I/O across the ControlLogix backplane, and over I/O links. ControlLogix controllers can communicate over EtherNet/IP, ControlNet, DeviceNet, DH+, Remote I/O, and RS-232-C (DF1/DH-485 protocol) networks and many third-party process and device networks. To provide communication for a ControlLogix controller, install the appropriate communication interface module into the chassis.

| Cat. No.      | Description   | User Memory                  |
|---------------|---|------------------------------|
| 1756-L83E     | ControlLogix controller, 1 built-in USB port <sup>(1)</sup> , single port EtherNet/IP | 10 MB                        |
| 1756-L85E     |   | 40 MB                        |
| 1756-L71      | ControlLogix controller, 1 built-in USB port <sup>(1)</sup>                           | 2 MB                         |
| 1756-L72      |   | 4 MB                         |
| 1756-L73      |   | 8 MB                         |

| 1756-L71EROMS | Armor GuardLogix controllers, EtherNet/IP dual port                                   | 2 MB standard<br>1 MB safety |
| 1756-L72ERMOS |   | 4 MB standard<br>2 MB safety |

(1) The USB port is intended only for temporary local programming purposes and not intended for permanent connection. Do not use the USB port in hazardous locations.

For detailed specifications, see the 1756 ControlLogix Controllers Technical Data, publication [1756-TD001](#).

## Standard ControlLogix Controllers

The ControlLogix controller is part of the Logix5000 family of controllers. A ControlLogix system includes the following:

- The ControlLogix controller, available in different combinations of user memory
- Studio 5000 environment
- 1756 ControlLogix I/O modules that reside in a 1756 chassis
- Separate communication modules for network communication

| Feature  | 1756-L71, 1756-L72, 1756-L73, 1756-L74, 1756-L75   | 1756-L83E, 1756-L85E   |
|--|--|--|
| Controller tasks                                       | <ul style="list-style-type: none"> <li>• 32 tasks</li> <li>• 1000 programs/task<sup>(2)</sup></li> <li>• Event tasks: all event triggers</li> </ul>  | <ul style="list-style-type: none"> <li>• 32 tasks</li> <li>• 1000 programs/task</li> <li>• Event tasks: all event triggers</li> </ul>  |
| Built-in communication ports                           | 1 port USB Client  | <ul style="list-style-type: none"> <li>• 1 port USB client</li> <li>• Single-port EtherNet/IP</li> </ul>   |

| Controller resources, max                              | 500 connections  | <ul style="list-style-type: none"> <li>• 1756-L83E: 100 EtherNet/IP nodes<sup>(3)</sup></li> <li>• 1756-L85E: 300 EtherNet/IP nodes<sup>(3)</sup></li> </ul>   |
| Network connections, per network module <sup>(1)</sup> | <ul style="list-style-type: none"> <li>• 256 EtherNet/IP; 128 TCP (1756-EN2x, 1756-ENxT(R))</li> <li>• 128 EtherNet/IP; 64 TCP (1756-ENBT)</li> <li>• 128 ControlNet (1756-CN2/B)</li> <li>• 100 ControlNet (1756-CN2/A)</li> <li>• 64 EtherNet/IP; 32 TCP (5069-AENTR)</li> <li>• 40 ControlNet (1756-CNB)</li> </ul> | <ul style="list-style-type: none"> <li>• 256 EtherNet/IP; 128 TCP (1756-EN2x, 1756-ENxT(R))</li> <li>• 128 EtherNet/IP; 64 TCP (1756-ENBT)</li> <li>• 128 ControlNet (1756-CN2/B)</li> <li>• 100 ControlNet (1756-CN2/A)</li> <li>• 64 EtherNet/IP; 32 TCP (5069-AENTR)</li> <li>• 40 ControlNet (1756-CNB)</li> </ul> |
| Controller redundancy                                  | Full support   | None   |
| Integrated motion                                      | <ul style="list-style-type: none"> <li>• EtherNet/IP connection</li> <li>• SERCOS interface</li> <li>• Analog options (encoder input, LDT input, SSI input)</li> </ul>   | <ul style="list-style-type: none"> <li>• EtherNet/IP connection</li> </ul>   |
| Programming languages                                  | <ul style="list-style-type: none"> <li>• Relay ladder</li> <li>• Structured text</li> <li>• Function block</li> <li>• Sequential function chart (SFC)</li> </ul>   | <ul style="list-style-type: none"> <li>• Relay ladder</li> <li>• Structured text</li> <li>• Function block</li> <li>• Sequential function chart (SFC)</li> </ul>   |

(1) For the 1756-L83E and 1756-L85E controllers, the total number of devices cannot exceed the total number of devices that the controller supports. The number of connections per network module shown is the maximum designed capacity of the modules. The device data size and requested data rate determines the actual device capacity.

(2) Studio 5000, version 23 and earlier, is limited to 100 Programs/Task.

(3) This is the maximum number of EtherNet/IP nodes supported by the controller, which includes the front port and communication modules.

## ControlLogix-XT Controllers

The ControlLogix-XT controllers function in the same way as the traditional ControlLogix controllers, with an extended temperature range, and have the same features as the ControlLogix L7 controllers.

The ControlLogix-XT products include control and communication system components that are conformally coated to extend product life in harsh, corrosive environments:

- While the standard ControlLogix system can withstand temperatures from 0...60 °C (33...140 °F), the ControlLogix-XT system can withstand temperatures from 25...70 °C (-13...158 °F).

## Redundant ControlLogix Controllers

The ControlLogix controller supports controller redundancy. In a redundant controller system, you need these components:

- Two 1756 chassis each with the following the same:
  - Number of slots
  - Modules in the same slots
  - Redundancy firmware revisions in each module
  - Two additional ControlNet nodes<sup>(1)</sup> outside the redundant chassis pair.
- One 1756-RM2 or 1756-RM2XT module per chassis that supports the following:
  - One or two ControlLogix or ControlLogix-XT controllers of the same family
  - As many as seven ControlNet or EtherNet/IP communication modules in any combination
- One or two 1756-RMCx cables

For additional redundancy rules and restrictions, see the ControlLogix Enhanced Redundancy System User Manual, publication [1756-UM535](#).

(1) For a ControlNet I/O drop, two more ControlNet nodes are required outside the redundancy chassis pair. Not applicable with Ethernet I/O control.

## GuardLogix Controllers

A GuardLogix controller is a ControlLogix controller that also provides safety control.

| Application | Description   |
|-------------|---|
| SIL 1, 2, 3 | The GuardLogix controller system is type-approved and certified for use in safety applications up to and including SIL 3 according to IEC 61508, and applications up to and including PLe/Cat.4 according to ISO 13849-1. For more information, see the following: <ul style="list-style-type: none"> <li>GuardLogix 5570 Controllers User Manual, publication <a href="#">1756-UM022</a>. Provides information on how to install, configure, and operate GuardLogix 5570 Controllers in Studio 5000, Version 21 or later projects.</li> <li>GuardLogix 5570 Controller Systems Safety Reference Manual, publication <a href="#">1756-RM099</a>. Provides information on how to meet safety application requirements for GuardLogix 5570 Controllers in Studio 5000, Version 21 or later projects.</li> </ul> |

The GuardLogix system is a dual controller solution. You must use a primary controller and a safety partner to achieve SIL 3/PLe/Cat. 4.

| Primary Controller              | Safety Partner |
|---------------------------------|----------------|
| 1756-L71S, 1756-L72S, 1756-L73S | 1756-L7SP      |
| 1756-L73SXT                     | 1756-L7SPXt    |

During development, safety and standard have the same rules, multiple programmers, online editing, and forcing are all allowed. Once the project is tested and ready for final validation, you set the Safety Task to a SIL 3 integrity level, which the GuardLogix controller enforces. When safety memory is locked and protected, the safety logic cannot be modified and all safety functions operate with SIL 3 integrity. On the standard side of the GuardLogix controller, all functions operate like a regular Logix controller.

Use Guard I/O™ modules for field device connectivity on Ethernet or DeviceNet networks, and for safety interlocking between GuardLogix controllers use Ethernet or ControlNet networks. Multiple GuardLogix controllers can share safety data for zone to zone interlocking, or one GuardLogix controller can use remote distributed safety I/O between different cells/areas.

The GuardLogix controller has the standard features of a ControlLogix controller and these safety-related features.

| Feature                                 | 1756-LSP, 1756-L71S, 1756-L72S, 1756-L73S, 1756-L7SP, 1756-L73SXT, 1756-L7SPXt  |

## Armor ControlLogix and Armor GuardLogix Controllers

The Armor ControlLogix controller, extends the standard ControlLogix platform to the On-Machine space. The Armor GuardLogix controller delivers safety control up to SIL 3, PLe, CAT 4.

Both controllers have the equivalent of two embedded 1756-EN3TR modules, which offer dual independent Ethernet ports that support a DLR network topology.

| Feature               | 1756-L71EROM, 1756-L72EROM  | 1756-L71ERMOS, 1756-L72EROMS  |
|-----------------------|---|---|
| Communication options | Standard <ul style="list-style-type: none"> <li>• EtherNet/IP</li> </ul>  | Standard and safety <ul style="list-style-type: none"> <li>• EtherNet/IP</li> </ul>   |

| Controller redundancy | Not supported   |   |
| Programming languages | <ul style="list-style-type: none"> <li>• Relay ladder</li> <li>• Structured Text</li> <li>• Function block</li> <li>• Sequential function chart</li> </ul>  | <ul style="list-style-type: none"> <li>• Relay ladder<sup>(1)</sup></li> <li>• Structured Text</li> <li>• Function block</li> <li>• Sequential function chart</li> <li>• Safety application instructions<sup>(1)</sup></li> </ul> |

(1) The safety task supports only relay ladder logic.

## Accessories—Controllers

### Memory Cards

Memory cards offer nonvolatile memory to store a user program and tag data on a controller. The ControlLogix L7 and GuardLogix L7 controllers ship with 1784-SD1 Secure Digital (SD) card installed. The memory card installs in a socket on the controller. Through the Logix Designer application, you can manually trigger the controller to save to or load from nonvolatile memory or configure the controller to load from nonvolatile memory on powerup.

| Attribute             | 1784-SD1                                    | 1784-SD2 |
|-----------------------|---|----------|
| Memory                | 1 GB  | 2 GB     |
| Supported controllers | 1756 ControlLogix L7 and 1756 GuardLogix L7 |          |
| Weight, approx        | 1.76 g (0.062 oz)                           |          |

### 1756 Energy Storage Modules

Instead of a battery, the ControlLogix and GuardLogix controllers ship with a 1756-ESMCAP energy storage module (ESM) installed.

| Cat No.     | Description   |
|-------------|---|
| 1756-ESMCAP | Capacitor-based ESM included with the controller.   |
| 1756-ESMNSE | ESM without WallClockTime back-up power. Additionally, you can use this ESM only with a 1756-L73 (8 MB) or smaller memory-sized controller. Use this ESM if your application requires that the installed ESM deplete its residual energy to 40 µJ or less before transporting it into or out of your application. |
| 1756-ESMNRM | ESM that secures the controller by permanently preventing the USB connection and SD card use. This ESM provides your application an enhanced degree of security.  |

The ControlLogix-XT extreme temperature controller ships with a 1756-ESMNCPXT energy storage module installed.

| Cat No.       | Description   |
|---------------|---|
| 1756-ESMNCPXT | Capacitor-based ESM included with the controller.   |
| 1756-ESMNSEXT | ESM without WallClockTime back-up power. Additionally, you can use this ESM only with a 1756-L73XT (8 MB) or smaller memory-sized controller. Use this ESM if your application requires that the installed ESM deplete its residual energy to 40 µJ or less before transporting it into or out of your application. |
| 1756-ESMNRMXT | ESM that secures the controller by permanently preventing the USB connection and SD card use. This ESM provides your application an enhanced degree of security.  |

The 1756-L7SP safety partner for a GuardLogix system has the following modules available.

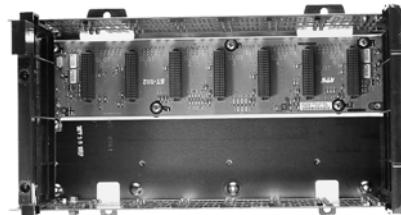

| Cat No.       | Description   |
|---------------|---|
| 1756-SPESMNSE | Capacitor-based ESM for a GuardLogix safety partner.  |
| 1756-SPESMNRM | ESM for a GuardLogix safety partner that secures the safety partner by permanently preventing the USB connection and SD card use. |

# ControlLogix Chassis

The ControlLogix system is a modular system that requires a 1756 I/O chassis. Place any module into any slot. The backplane provides a high-speed communication path between modules.

The chassis are designed for horizontal-only, back-panel mounting. The chassis are available in these options:

- Standard chassis
- ControlLogix-XT chassis

For detailed specifications, see the 1756 ControlLogix Chassis Specifications Technical Data, publication [1756-TD006](#).

## Standard Chassis

The chassis backplane provides a high-speed communication path between modules and distributes power to each of the modules within the chassis.

| Cat. No. | Description      | Slots |
|----------|------------------|-------|
| 1756-A4  | Standard chassis | 4     |
| 1756-A7  |                  | 7     |
| 1756-A10 |                  | 10    |
| 1756-A13 |                  | 13    |
| 1756-A17 |                  | 17    |

## ControlLogix-XT Chassis

The ControlLogix-XT chassis support extreme temperature environments.

| Cat. No.  | Description             | Slots | Temperature Range          |
|-----------|-------------------------|-------|----------------------------|
| 1756-A7XT | ControlLogix-XT chassis | 7     | -25...70 °C (-13...158 °F) |

## Accessories - Chassis

Use a slot filler module to fill empty slots.

| Cat. No.  | Description   |
|-----------|---|
| 1756-N2   | Slot filler module for empty slots in standard ControlLogix chassis |
| 1756-N2XT | Slot filler module for empty slots in ControlLogix-XT chassis       |

# ControlLogix Power Supplies

ControlLogix power supplies are used with the 1756 chassis to provide 1.2V, 3.3V, 5V, and 24V DC power directly to the chassis backplane. Select from these configurations:

- Standard power supplies
- ControlLogix-XT power supplies
- Redundant power supplies

For detailed specifications, see the 1756 ControlLogix Power Supplies Specifications Technical Data, publication [1756-TD005](#).

## Standard Power Supplies

You mount a standard power supply directly on the left end of the chassis, where it plugs directly into the backplane.

| Cat. No.  | Description              | Voltage Category | Operating Voltage Range | Chassis                          |
|-----------|--------------------------|------------------|-------------------------|----------------------------------|
| 1756-PA72 | Standard AC power supply | 120V/220V AC     | 85...265V AC            | Standard, series A, and series B |
| 1756-PA75 |                          | 120V/220V AC     | 85...265V AC            | Standard, series B               |
| 1756-PB72 | Standard DC power supply | 24V DC           | 18...32V DC             | Standard, series A, and series B |
| 1756-PB75 |                          | 24V DC           | 18...32V DC             | Standard, series B               |
| 1756-PC75 |                          | 48V DC           | 30...60V DC             | Standard, series B               |
| 1756-PH75 |                          | 125V DC          | 90...143V DC            | Standard, series B               |

## ControlLogix-XT Power Supplies

The ControlLogix-XT power supplies support extreme temperature environments.

| Cat. No.  | Description                     | Voltage Category | Operating Voltage Range | Chassis |
|-----------|---------------------------------|------------------|-------------------------|---------|
| 1756-PAXT | ControlLogix-XT AC power supply | 85...265V AC     | 120/240V AC             | XT      |
| 1756-PBXT | ControlLogix-XT DC power supply | 24V DC           | 18...32V DC             | XT      |

## Redundant Power Supplies

A redundant power supply system provides extra uptime protection for chassis that are used in critical applications. The redundant power supplies funnel power through the chassis adapter to the ControlLogix series B chassis backplane. To build a redundant power supply system, you need the following components.

| Cat. No.                           | Amount | Description  | Voltage Category           | Operating Voltage Range           | Chassis            |
|------------------------------------|--------|--|----------------------------|-----------------------------------|--------------------|
| 1756-PAR2                          | Kit    | Bundled system contains: <ul style="list-style-type: none"> <li>– Two 1756-PA75R power supplies</li> <li>– Two 1756-CPR2 cables</li> <li>– One 1756-PSCA2 chassis adapter</li> </ul> | 110V AC                    | N/A                               | Standard, series B |
| 1756-PBR2                          | Kit    | Bundled system contains: <ul style="list-style-type: none"> <li>– Two 1756-PB75R power supplies</li> <li>– Two 1756-CPR2 cables</li> <li>– One 1756-PSCA2 chassis adapter</li> </ul> | 24V DC                     | N/A                               |                    |
| 1756-PA75R/A<br>or<br>1756-PB75R/A | 2      | Redundant AC power supply<br><br>Redundant DC power supply   | 120V/220V AC<br><br>24V DC | 85...256V AC<br><br>19.2...32V DC |                    |
| 1756-CPR2                          | 2      | Redundant power supply cable<br>(Length = 0.91 m [3 ft])   | N/A                        | N/A                               |                    |
| 1756-PSCA2                         | 1      | Redundant power supply chassis adapter   |                            |                                   |                    |
| N/A (user-supplied)                | 2      | Annunciator wiring <sup>(1)</sup><br>(Maximum length = 10 m [32.8 ft])   |                            |                                   |                    |

(1) Optional user-supplied annunciator wiring can be connected to the solid-state relay input for status and troubleshooting purposes.
